Imagine TO

Torino offers the entire city for the testing of innovation, providing a system of physical, technological, relational and know-how infrastructures to experiment and then scale the proposed innovations.

Building on its territorial know-how and industrial past, Torino becomes an open laboratory of frontier innovation able to attract companies and skills to guide the development of the "City" of the future. The aim is to be recognized as a platform for testing urban innovations and as an entry point for its dissemination in Europe.

How TO

Torino City Lab is open to any company (Start-ups, SMEs, Social Enterprises, Industry) willing to test frontier innovation in any domain of the "Smart City".

Free Application

Proposal could be submitted anytime during the year and in any domain of public interest.

Your application will then be automatically available for eligibility check and the evaluation. During this time a "Technical Committee" will proceed with the evaluation. In the meantime, you may be invited for a physical meeting or you will be asked for further info on your proposal. An "experimentation contract" will be prepared so to specify the mutual commitments and interests in the testing period. You will receive a feedback about the evaluation in 60 working days after your submission. In case of need of specific authorization, the process could need further 45 days maximum.

Participation to Call for Challenges

The City Administration and/or other TCL Partner can periodically launch specific "Call for challenges" linked to sectoral policies, territories and technologies.

The participation will then be possible in response to these Calls and specific rules can be made explicit here.
This will lead to the creation of sectoral "LABS".
